Can't Buy Rain in May.

May has been a tough month on our Minnesota lawns. The efficiency of our lawn sprinkler systems has been put to a real test. During a normal year we would get enough rain to cover up the inefficiency of the placement of our sprinklers or sprinklers that are not operating correctly. A visit from your trusted irrigation professional can expose the faults that exist in your system. Even though you may have a well designed system, you may need to have some fine adjustments made to make it work more effectively. Use Your Water Right provides scientifically measured audits which will produce precisely where you need to make changes. Don't make decisions based upon opinion. Make your decisions based upon measured fact. For more info go to www.useyourwaterright.com.

Weathermatic Smartline Controller

INSIDE THIS ISSUE

Can't Buy Rain in May	Page 1
Technical Talk "Weathermatic Controller"	Page 1

The Bells and whistles stop right here. This is the Weathermatic 1600 Smartline Residential controller. This Clock comes with its own weather station. This weather station measures temperature, rainfall and evapotranspiration. Evapotranspiration is the amount of water which is released by both the soil and the plant material. These measurements are taken on a daily basis and applied to a new program each night. The second part of the programming is the onsite information. Each zone is marked on the controller for plant material, type of sprinklers, slope, soil and zip code. The controller puts all of these elements together to create a new program each night. No more need to adjust your clock according to the weather. This controller will do it for you every day. If it rains it will automatically figure how long your grass can sustain without water, before the program starts up again. You can also omit times when the system can not be running, such as ODD or EVEN days, or maybe every Tuesday of each week, because that is when you mow. This controller is also enhanced when irrigation audit information is programmed into it. If you are looking to upgrade this is the controller for you. For more info go to www.smartline.com. You can also email me at chrisv@useyourwaterright.com and I will send you a brochure.
